

# Scheduling

---

Set of tasks for baking cookies:

- Shop for groceries
- Put the cookies in the oven
- Clean the kitchen
- Beat the eggs in a bowl
- Measure the flour and sugar in a bowl
- Mix the eggs with the flour and sugar
- Turn on the oven
- Set the timer
- Take out the cookies

# Scheduling

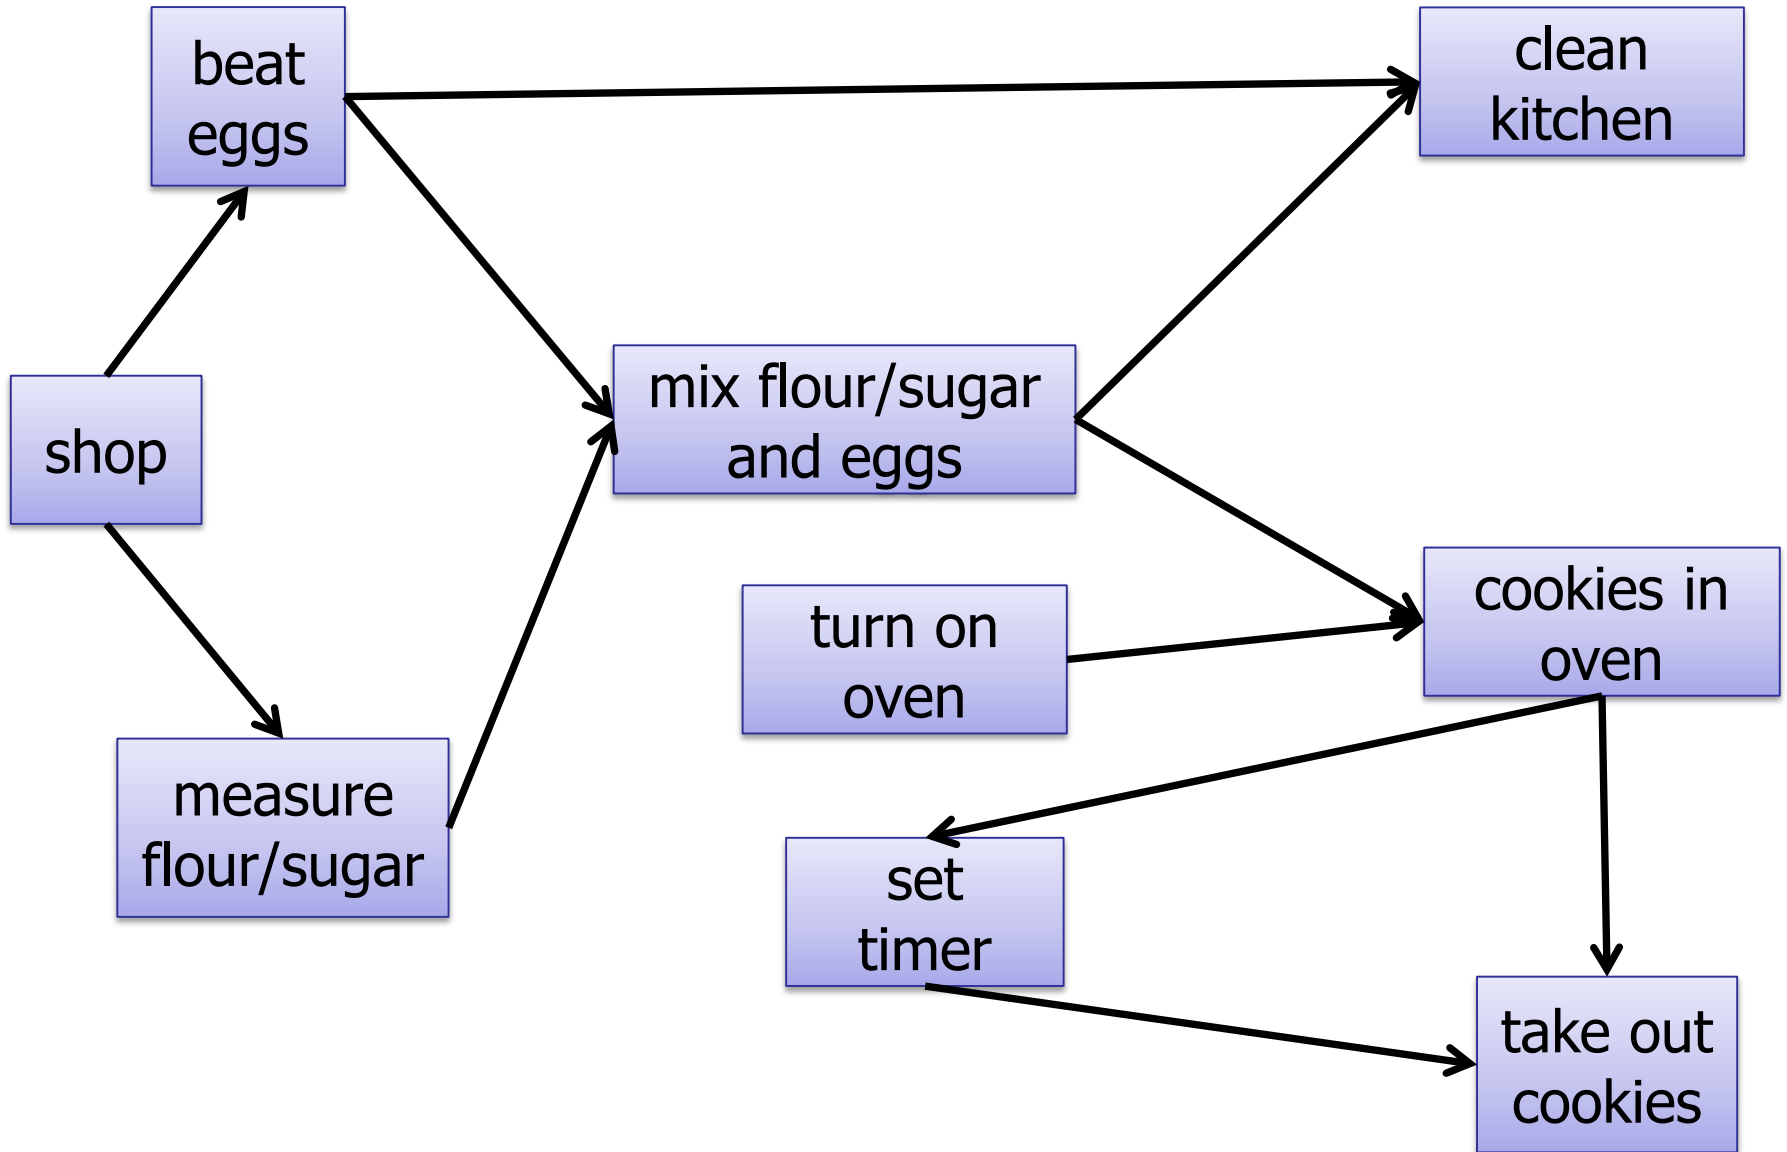

---

## Ordering:

- Shop for groceries **before** beat the eggs
- Shop for groceries **before** measure the flour
- Turn on the oven **before** put the cookies in the oven
- Beat the eggs **before** mix the eggs with the flour
- Measure the flour **before** mix the eggs with the flour
- Put the cookies in the oven **before** set the timer
- Measure the flour **before** clean the kitchen
- Beat the eggs **before** clean the kitchen
- Mix the flour and the eggs **before** clean the kitchen

---

# Topological Ordering

---

# Topological Order

---

## Properties:

1. Sequential total ordering of all nodes

1. shop

2. turn on oven

3. measure flour/sugar

4.  
eggs

# Topological Order

---

## Properties:

1. Sequential total ordering of all nodes

2. Edges only point forward

# Which one should we do first?

I HAVE LEFTOVER CHEESE.  
I SHOULD GET CHIPS  
AND MAKE NACHOS.

I HAVE LEFTOVER CHIPS.  
I SHOULD GET CHEESE  
AND MAKE NACHOS.

# Searching a (Directed) Graph

---

## **Pre-Order** Depth-First Search:

- Process each node when it is *first* visited.

# Searching a (Directed) Graph

---

## **Pre-Order** Depth-First Search:

- Process each node when it is *first* visited.

## **Post-Order** Depth-First Search:

- Process each node when it is *last* visited.
- Or, when all the neighbors are visited
- Or, when it is finished

# Depth-First Search

---

```
DFS-visit(Node[] nodeList, boolean[] visited, int startId){  
    for (every neighbor v of startId) {  
        if (!visited[v]){  
            visited[v] = true;  
  
            ProcessNode (v) ;  
  
            DFS-visit(nodeList, visited, v);  
        }  
    }  
}
```

# Depth-First Search

---

```
DFS-visit(Node[] nodeList, boolean[] visited, int startId){
    for (every neighbor v of startId) {
        if (!visited[v]){
            visited[v] = true;
            DFS-visit(nodeList, visited, v);
            ProcessNode (v) ;
        }
    }
}
```

# Topological Sort

---

What is the time complexity of topological sort?

DFS:  $O(V+E)$

# Depth-First Search

---

```
DFS-visit(Node[] nodeList, boolean[] visited, int startId){
    for (every neighbor v of startId) {
        if (!visited[v]){
            visited[v] = true;
            DFS-visit(nodeList, visited, v);
            schedule.prepend(v) ;
        }
    }
}
```

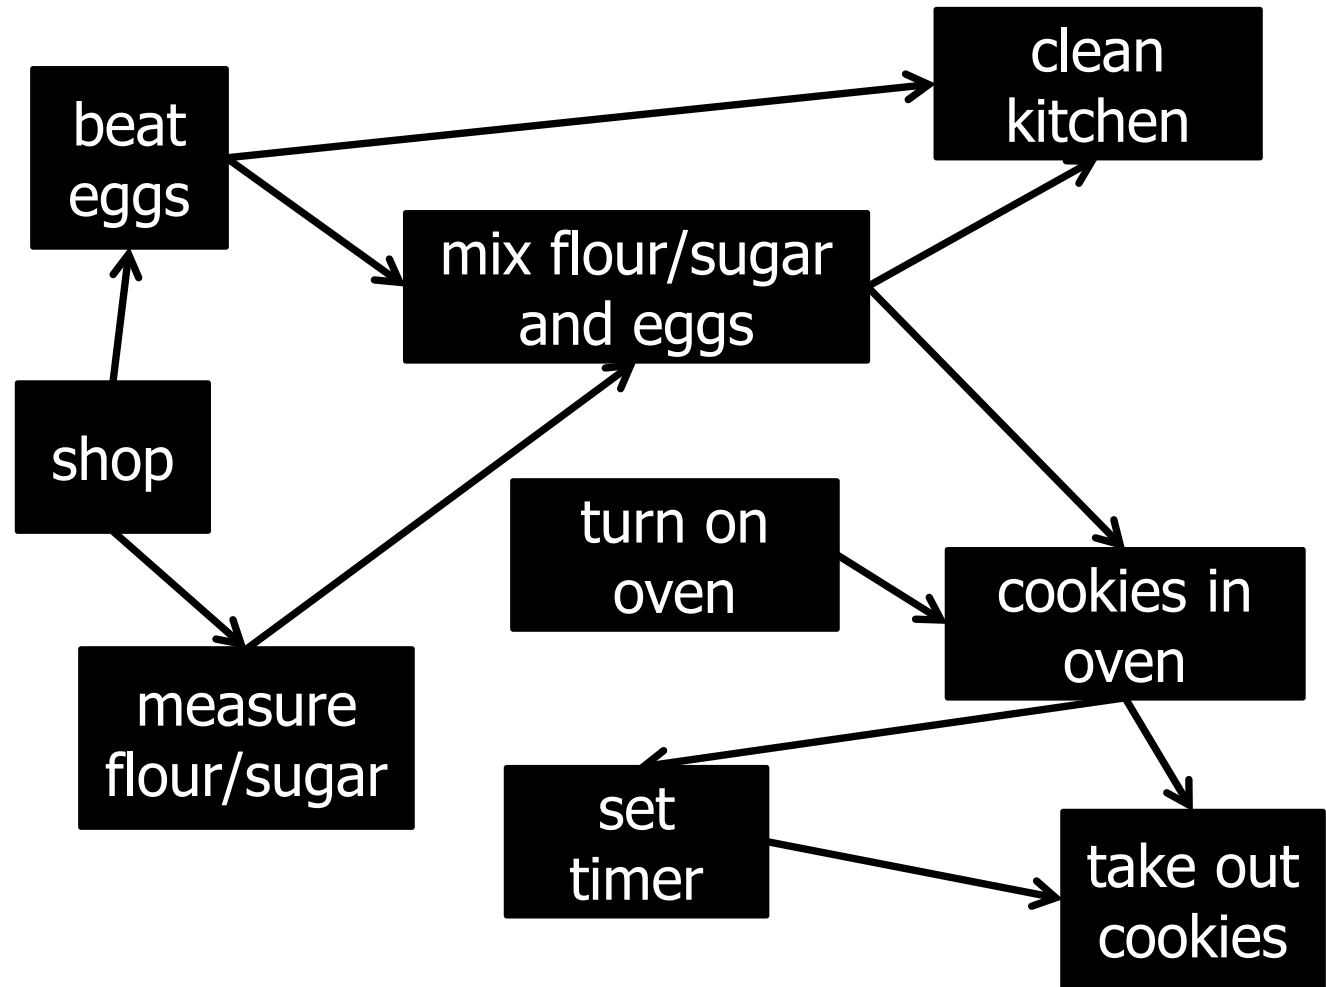

# Depth-First Search

---

```
for (start = i; start < nodeList.length; start++) {  
    if (!visited[start]) {  
        visited[start] = true;  
        DFS-visit(nodeList, visited, start);  
        schedule.prepend(v) ;  
    }  
}  
}
```

# Post-Order Depth-First Search

# Topological Sort

---

Input:

- Directed Acyclic Graph (DAG)

Output:

- Total ordering of nodes, where all edges point forwards.

Algorithm:

- Post-order Depth-First Search
- $O(V + E)$  time complexity

# Topological Sort

---

Alternative algorithm:

Input: directed graph  $G$

Repeat:

- $S$  = all nodes in  $G$  that have *no* incoming edges.
- Add nodes in  $S$  to the topo-order
- Remove all edges adjacent to nodes in  $S$
- Remove nodes in  $S$  from the graph

Time:

- $O(V + E)$  time complexity
