1.4 Gaussian Elimination

1.5 Homogeneous Linear System

2.1 Introduction to Matrices

2.2 Matrix Operations

Let's revise

- The **solutions** of a LS can be easily obtained from the **REF** of its augmented matrix
- An augmented matrix has **many** **REF** but **only one** **RREF**
- A LS has **no solution** if and only if the **last column** of its REF is a **pivot column**
- In a REF,
$$\begin{aligned} \text{number of non-zero rows} &= \text{number of leading entries} \\ &= \text{number of pivot columns} \end{aligned}$$
- In the REF of a consistent LS,
if **number of variables** in LS = **number of non-zero rows** in REF,
then the LS has **exactly one** solution
if **number of variables** in LS > **number of non-zero rows** in REF,
then the LS has **infinitely many** solutions

Merging two augmented matrices

$$\left\{ \begin{array}{rrcr} x & + & 2y & - & 3z & = & 1 \\ 2x & + & 6y & - & 11z & = & 1 \\ x & - & 2y & + & 7z & = & 1 \end{array} \right. \quad \left\{ \begin{array}{rrcr} x & + & 2y & - & 3z & = & 1 \\ 2x & + & 6y & - & 11z & = & 2 \\ x & - & 2y & + & 7z & = & 1 \end{array} \right.$$

Same coefficients

You can perform G.E. (G.J.E.) on the two systems
"simultaneously"

$$\left(\begin{array}{ccc|c|c} 1 & 2 & -3 & 1 & 1 \\ 2 & 6 & -11 & 1 & 2 \\ 1 & -2 & 7 & 1 & 1 \end{array} \right) \longrightarrow \left(\begin{array}{ccc|c|c} 1 & 2 & -3 & 1 & 1 \\ 0 & 2 & -5 & -1 & 0 \\ 0 & 0 & 0 & -2 & 0 \end{array} \right)$$

Linear Systems with “unknown” terms

$$\left(\begin{array}{cc|c} 1 & a & b \\ 0 & (a+1)(b-2) & (a+2)(b-1) \end{array} \right)$$

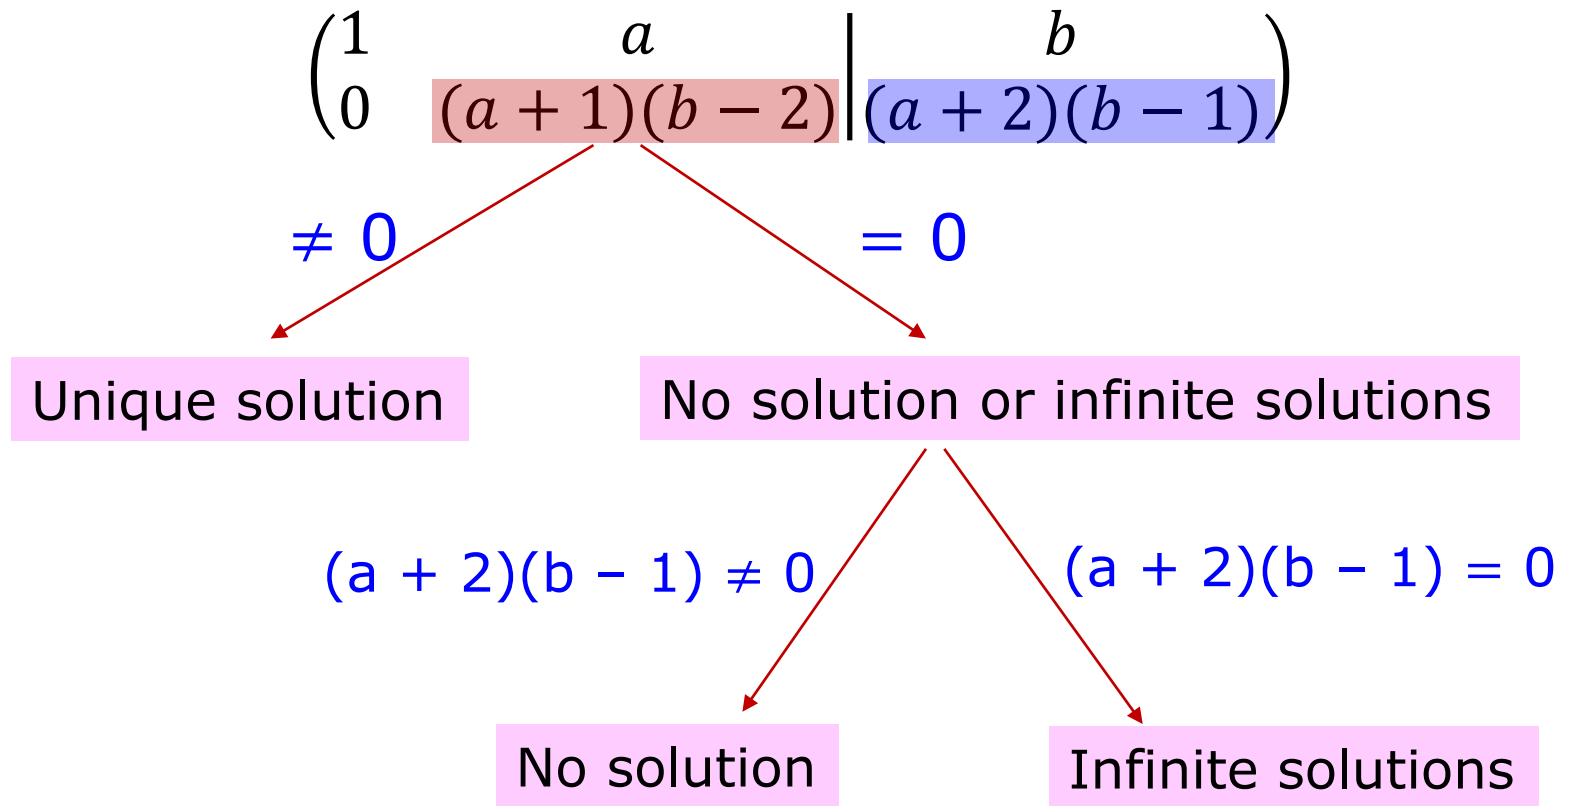

Determine the values of a and b so that the system has

- i. no solution
- ii. only 1 solution
- iii. infinitely many solutions

Row 1 has no effect on the # solutions.

Only need to analyse row 2.

Linear Systems with “unknown” terms

$$\begin{pmatrix} 1 & a \\ 0 & (a+1)(b-2) \end{pmatrix} \begin{vmatrix} b \\ (a+2)(b-1) \end{vmatrix}$$

Linear Systems with “unknown” terms

One solution: $(a+1)(b-2) \neq 0$

$$(a+1) \neq 0 \text{ AND } (b-2) \neq 0$$

$$a \neq -1 \text{ AND } b \neq 2$$

Infinite solutions: $(a+1)(b-2) = 0, (a+2)(b-1) = 0$

$$(a+1) = 0 \text{ OR } (b-2) = 0$$

$$a = -1 \text{ OR } b = 2$$

AND

$$(a+2) = 0 \text{ OR } (b-1) = 0$$

$$a = -2 \text{ OR } b = 1$$

Simplify as

$$a = -1 \text{ AND } b = 1 \text{ OR } b = 2 \text{ AND } a = -2$$

No solution: $(a + 1)(b - 2) = 0, (a + 2)(b - 1) \neq 0$

Linear Systems with “unknown” terms

No solution: $(a + 1)(b - 2) = 0, (a + 2)(b - 1) \neq 0$

$(a + 1) = 0$ **OR** $(b - 2) = 0$

$a = -1$ **OR** $b = 2$

AND

$(a + 2) \neq 0$ **AND** $(b - 1) \neq 0$

$a \neq -2$ **AND** $b \neq 1$

Simplify as

$a = -1$ **AND** $b \neq 1$

OR

$b = 2$ **AND** $a \neq -2$
